

AgentView® Data Collector Tool Kit

Organizations often find themselves in need of a unified view of data that may emanate from a variety of sources, often locked away in difficult to reach silos. Integrating data can be a laborious and expensive process. It doesn't need to be. The power and flexibility of the AgentView collection technology can be put to use in any organization where an integrated single view of information is required. The Data Collector Tool Kit has been used to collect and communicate critical network issues, as well as information from printers and other systems that might be located throughout the company. The process of identifying, collecting, filtering and publishing information is central to the architecture.

The diagram below shows some of the data sources that feed into the engine that delivers the performance metrics and alerts. Imagine your information as collected, stored in a database or sent to a scheduled report or dashboard.

Using the Tool Kit provides many benefits and contributes to performance through the following features:

- Powerful collectors map and extract key fields
- Information can be stored easily in a SQL database
- Data can be pushed via XML to another application
- Metrics can be sent to a dashboard or display for high visibility

How to find out more

Call us at 877 CSI (274)-5050 to learn more about the Data Collector Tool Kit and how it might help you with your data integration needs.
